

MODULES

Patients

Who are we?

PatientSource is a cloud based EPR solution, designed by clinicians, for clinicians. Our interoperable system plugs seamlessly in to your existing processes and moves paper medical records in to a digital hub, drastically reducing human error and improving patient care.

What is the module?

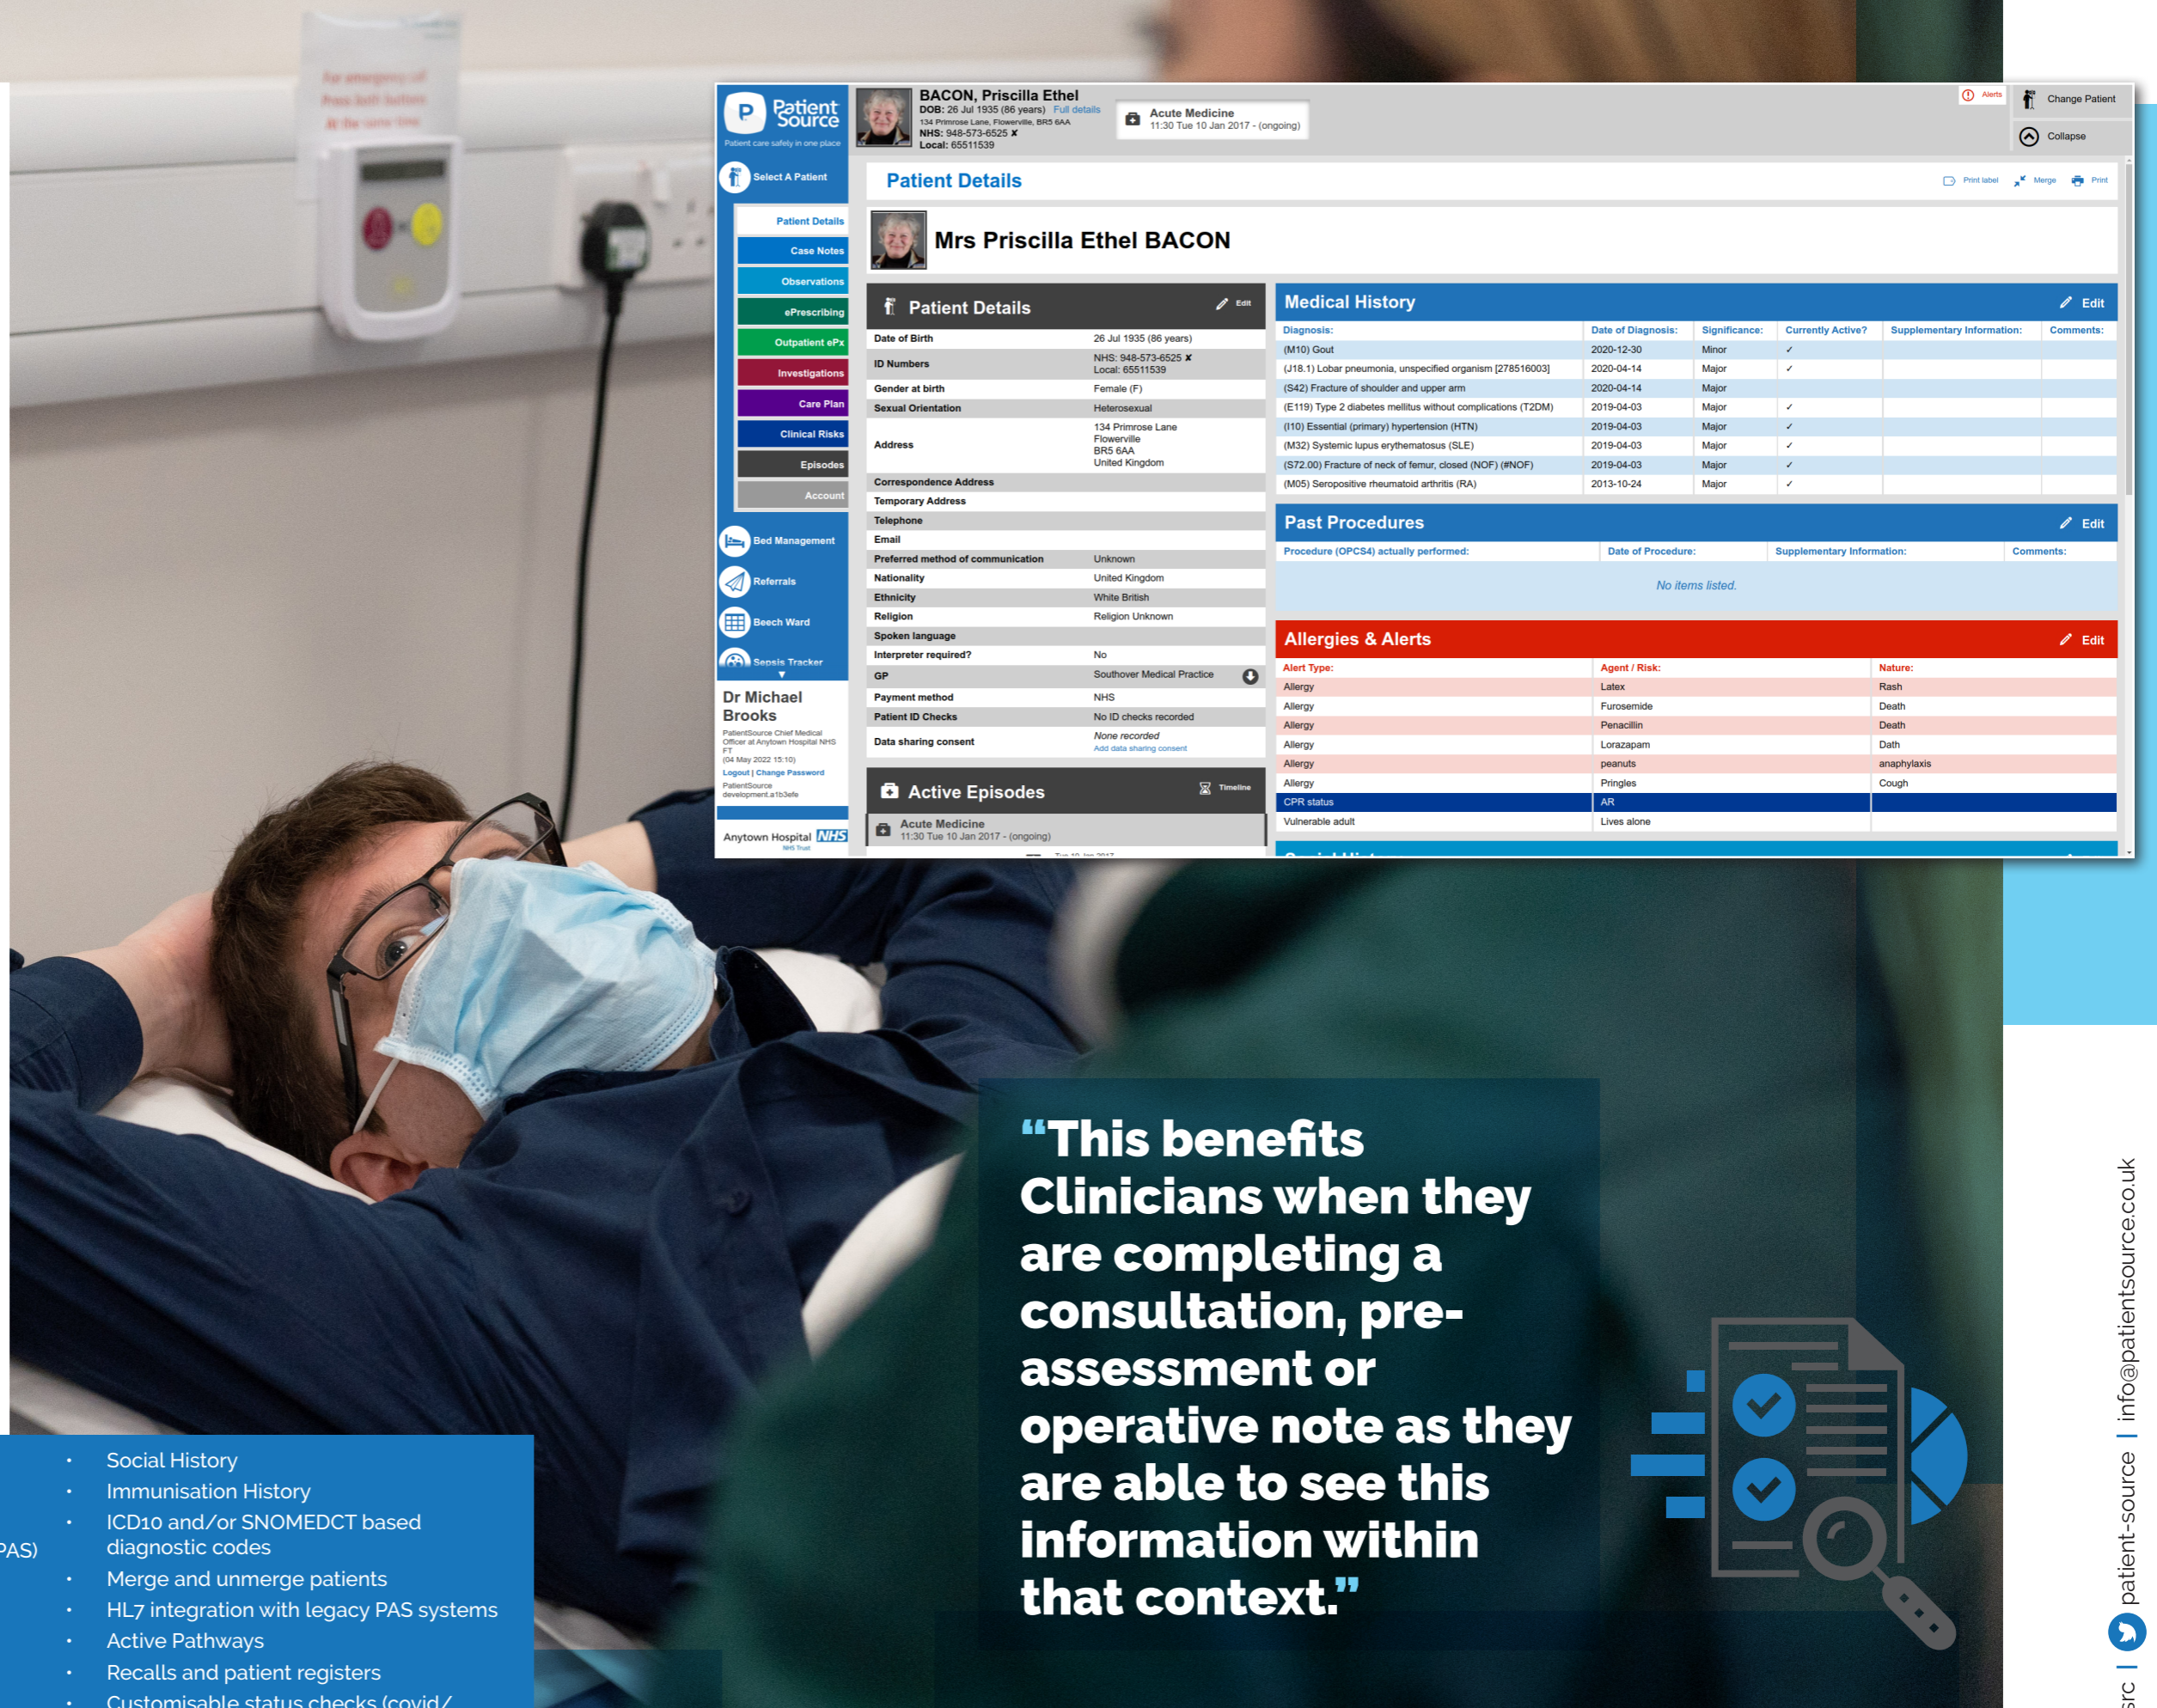

The Patients module allows you to search for and register patients, capture their demographic details and view a summary of their medical background. Registering a patient via the Patients module allows you to start building up clinical notes and scheduling events for them.

The Patients module can work in concert with the Episodes module to provide a fully functional Patient Administration System (PAS), but can also sit on top of existing external Patient Administration Systems, keeping in sync and providing a view through to that system.

When viewing a patient in PatientSource, the Patients module is the first module you see and it gives a bitesize overview of the patient details provided, from name, next-of-kin, to past procedures through to allergies and alerts. Sections such as past procedures, medical history and allergies and alerts have the functionality to pull through the information recorded, into the Case Notes module. This benefits Clinicians when they are completing a consultation, pre-assessment or operative note as they are able to see this information within that context. This in turn benefits the patient as this functionality ensures the clinician can provide efficient, higher quality, safer and more personalised care at the point of contact.

Benefits and Key Features

- Patient demographics
- Multiple identifiers (local, NHS, legacy PAS)
- Equality monitoring: religion, ethnicity, sexuality and gender
- Next of Kin / Family contacts
- Past Medical History / Problem list
- Past Surgical History / Procedures list
- Allergies & Alerts
- Social History
- Immunisation History
- ICD10 and/or SNOMEDCT based diagnostic codes
- Merge and unmerge patients
- HL7 integration with legacy PAS systems
- Active Pathways
- Recalls and patient registers
- Customisable status checks (covid/ pregnancy)

“This benefits Clinicians when they are completing a consultation, pre-assessment or operative note as they are able to see this information within that context.”

Why – Why should you care? Why go with PS?

Save time - An estimated 15% of clinical staff time is wasted looking for and handling paper notes

Save money - over £4,800,000-worth of staff time wasted at an average-sized NHS trust per annum

- **8,640** estimated cases of patients at risk of harm as a result of missing paper notes
- **4,896** repeat appointments required as a result of notes missing at the appointment
- **£528,768** estimated cost of additional appointments required as a result of missing paper notes

Save lives - missing documentation, skipped assessments, prescription errors and mis-calculated scores contribute to the 9% medical error rate for admissions in paper-based hospitals.

An Agile and Interoperable Solution

Because our solution is modular and cloud based, we provide the flexibility to fit straight in to your clinic or hospital either as a departmental system or a greenfield solution that replaces your paper based processes. Implementation is easy, taking as little as 4 weeks to be up and running from inception. Interoperability is the future of digital healthcare, which is why it is at the centre of everything we do.

What are the next steps?

If you would like to see our Patients module working in action, or just want to know more about PatientSource, we would be happy to organise a short demo with one of our product specialists. If you are viewing this document online, you can contact us by clicking **HERE** or alternatively visit our website to contact us and a member of our team will be in touch.

“Because our solution is modular and cloud based, we provide the flexibility to fit straight in to your clinic or hospital either as a departmental system or a greenfield solution that replaces your paper based processes.”
